Adaptive mail: a flexible email client app

Description

1. **App Structure**: Build a customizable interface that lets users integrate multiple email accounts, set up personalized folders, filters, and notification settings.

2. **Email Management Features**: Develop flexible sorting, searching, and categorization options to help users easily find specific emails, with additional options like scheduled sends and message snoozing.

3. **User Data Permissions**: Since email clients require access to users' accounts, you'll need to ensure secure authentication (OAuth2 is commonly used) and protect user data. Permissions should follow data security standards, especially if using services like Gmail, Outlook, etc.

4. **Local Storage and Cloud Sync**: Consider options for local storage of emails with the ability to sync with the cloud. Make sure you clarify these permissions with users to build trust.

5. **Naan Mudhalvan Program Compliance**: Check if the program has specific requirements or restrictions for apps accessing sensitive data or communicating with external services.
